Trevor Elliott

Experience

2019–Present **Infrastructure Engineer**, *Stripe*, Portland, OR.

Working on the sorbet typechecker and compiler for ruby.

- Key contributor on the sorbet compiler, implementing optimizations and improving coverage for the ruby language. Generated native code with llvm, targeting the ruby vm's c api.
- Implemented type-system features and improved type-checker runtime performance.
- Mentored an intern on the sorbet compiler project, and organized/ran regular meetings with external contributors from other companies.

2017–2019 **Compiler Engineer**, *Groq, Inc.*, Portland, OR.

Worked on a compiler for tensorflow models, targeting a custom ASIC that accelerates inference. Focused on compiler performance and optimization of results.

2007–2017 **Engineer and Researcher**, *Galois, Inc.*, Portland, OR.

Contributed to a broad range of projects, notably:

- Developed domain specific languages in Haskell, including the msf-haskell metasploit DSL and the Ivory DSL for memory-safe embedded programming
- Developed and contributed to multiple full language implementations, including Cryptol and the Salty GR(1) reactive synthesis DSL
- Implemented the HaNS network stack
- Aided ASIC design and verification for lightweight cryptographic primitives from Cryptol specifications

2004–2007 **Developer**, *CollegeNET*, Portland, OR.

Helped to transition a large desktop application to a suite of web services, and developed tools based off of those web services. Also assisted with some front-end web development, and implemented an LDAP-based authentication system.

2002–2004 **Technical Support**, *CollegeNET*, Portland, OR.

Provided technical support to a large client base.

Education

2008 **B.S. Computer Science**, *Portland State University*, Portland, OR.

Open Source Projects

sorbet	The sorbet typechecker and compiler for ruby
cereal	Haskell library for fast binary format parsing/rendering
ivory	Haskell EDSL for memory-safe embedded programming
salty	Reactive synthesis DSL for GR(1) specifications
HaNS	A TCP/IP network stack implemented in haskell
Cryptol	DSL for implementation and verification of cryptographic algorithms
HaLVM	Port of the GHC runtime to the Xen hypervisor
llvm-pretty	An EDSL for generating textual llvm bitcode
huff	A fast-forward based classical planning EDSL

Skills

Languages	haskell, c/c++, rust, java, javascript, fsharp, ocaml, python, ruby, lua, assembly (x86, arm), coq, isabelle/hol, shell scripting
Tools	z3, smt-lib, lldb, gdb, bazel, gnu make, vim/neovim
